

CMA was started in 1982 as a result of its founding members' previous experience in leading companies in the sector. CMA has always specialised in producing enological machinery for small and medium size wine cellars. At the present CMA products can be found not only on the home market, but also in Germany, France, Austria and other European Community member countries. This progressive company growth is due to the promotion of mutual trust with its clients, who in turn help the company to preserve the up-to-date quality of the machinery it produces.
